Date	02 October 2026
Team ID	6ab636abdcdae33acb393f Fc1
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Solution Requirements

Define Functional and Non-Functional Requirements:

Functional Requirements define what the system should do. Non-Functional Requirements define how the system should perform.

Step 1: Functional Requirements Table:

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	Users authenticate via ServiceNow SSO/LDAP to access the Incident module with role-based access	High
2	Authorization levels	ITIL users can create/edit incidents; Admin users can configure UI Policies and Client Scripts	High
3	External interfaces	Integration with ServiceNow Glide API for client-side field manipulation (g_form, g_user)	High
4	Transactions processing	onChange script auto-populates Urgency when Impact changes; onSubmit validates before save	High
5	Reporting	Incident reports track data completeness rates and SLA compliance metrics	Medium
6	Business rules	When Impact = 1 (High), Assigned To becomes mandatory and Urgency auto-sets to 1 (High)	High
7	Compliance	ServiceNow ITSM best practices and ITIL framework compliance for Incident Management	Medium
8	Field Validation	onCellEdit script validates field values when editing incidents from list view	High

Step 2: Non-Functional Requirements Table:

S.No	NFR Category	Requirement Description	Target Metric
1	Performance & Speed	Client Scripts execute without perceptible delay on form load and field change	Script execution < 200ms
2	Scalability	UI Policies and Client Scripts work across all incident records regardless of volume	Supports 100,000+ incident records

S.No	NFR Category	Requirement Description	Target Metric
3	Security & Data Privacy	Scripts run client-side only; no sensitive data exposed in browser console	Zero data leakage in client logs
4	Reliability & Availability	UI Policies activate consistently on every form load without failures	99.9% policy activation rate
5	Usability & Accessibility	Field messages and validation prompts are clear, descriptive, and accessible	WCAG 2.1 AA compliant messages
6	Maintainability	Scripts are modular, well-commented, and follow ServiceNow scripting best practices	Code review score > 4/5
