Project Name:	Implement Client Script & UI Policy	**Maximum Marks:**	5 Marks

Solution Architecture

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture.

```
Layer 1 - Presentation/Client Layer:
- ServiceNow Incident Form (UI16/UI Builder)
- Form Fields: Impact, Urgency, Assigned To, Description
- User Interface elements and field messages

Layer 2 - Application Logic Layer (Client-Side):
- UI Policy Engine: Evaluates conditions and applies field actions
- Client Script Engine: Executes onChange, onSubmit, onCellEdit scripts
- Glide API: g_form (field manipulation), g_user (user context)

Layer 3 - Server/Data Layer:
- ServiceNow Application Server (Glide)
- Incident Table [incident]
- sys_ui_policy (UI Policy definitions)
- sys_script_client (Client Script definitions)
- CMDB / Reference tables
```

Component Description:

Component Name	Description / Role	Technologies Used
Presentation Layer	ServiceNow Incident Form providing UI for creating and editing incidents	ServiceNow UI16, Form Designer, HTML, CSS
UI Policy Engine	Evaluates conditions on form load/change and applies field actions (mandatory, read-only, visible)	ServiceNow UI Policy Framework, JavaScript
Client Script Engine	Executes custom JavaScript on form events (onChange, onSubmit, onLoad, onCellEdit)	JavaScript, ServiceNow Glide API (g_form)
Data Layer	Stores incident records and configuration data for UI Policies and Client Scripts	ServiceNow CMDB, MariaDB, Incident Table [incident]
