Performance Testing

Date	Team ID	Project Name	Maximum Marks
02 October 2026	6ab636abdcdae33acb393f Fc1	Implement Client Script & UI Policy	5 Marks

Step 1 - Testing Overview

Field	Details
Testing Tool Used	ServiceNow Automated Test Framework (ATF), Manual Browser Testing, Chrome DevTools
Type of Testing	Functional Testing, Form Validation Testing, Regression Testing
Target Module / API	Incident Form (UI Policies, Client Scripts)
Test Environment	ServiceNow Personal Developer Instance (PDI)
Test Date	12 October 2026

Step 2 - Test Scenarios

S.No	Scenario	V. Users	Time	Expected Outcome
1	Set Impact to High, verify Assigned To becomes man	1	30s	Assigned To field shows mandatory indica
2	Set Impact to High, verify Urgency auto-populates.	1	30s	Urgency = High and field is read-only
3	Submit incident with Impact=High and no Assigned T	1	15s	Save is blocked with error message
4	Edit Impact value from list view with invalid data	1	15s	Edit is rejected with validation message

Step 3 - Results

S.No	Metric	Target	Actual	Status	Remarks
1	Response Time (Avg)	< 2 seconds	0.8 seconds	Pass	Client scripts execute instantly
2	Response Time (Max)	< 5 seconds	1.2 seconds	Pass	Includes form reload time
3	Throughput	N/A	N/A	N/A	Not applicable for UI testing
4	Error Rate	< 1%	0%	Pass	All validations working correctly
5	CPU Utilization	< 80%	15%	Pass	Minimal client-side processing
6	Memory Utilization	< 80%	25%	Pass	No memory leaks in scripts

Step 4 - Observations

Key Findings: All UI Policies and Client Scripts execute within acceptable time limits. The onChange script fires immediately on field change with zero perceptible delay. The onSubmit validation provides instant feedback before form

submission.

Bottlenecks Identified: None significant. Client-side scripts have negligible performance impact on page load.

Optimization Steps Taken: Added isLoading check in onChange to skip execution during initial form load, reducing unnecessary API calls.

Step 5 - Screenshots
